Quiz 1

1. What are the CPU hazards we discussed in class?
    a. Data, Control, and propagation delays
    b. Data, Control, and Structural
    c. CAS, RAS, and propagation hazards
    d. SRAM, DRAM
2. What's the purpose of Branch Prediction?
    a. Understand how branches operate
    b. To try to predict the outcome of a branch to avoid control hazards
    c. To predict what type branches will be used
3. What's a reason why the GPR ISA lends itself to compilers being able to generate efficient code?
    a. Large number of general-purpose registers
    b. Small amount of general-purpose registers
    c. Have good compilers supporting them
    d. All run using SRAM
4. Which type of memory is more expensive per storage unit?
    a. SRAM
    b. DRAM
5. What's a major advantage of having a north bridge in a computer system?
    a. Allowing more memory channels for each connected CPU
    b. Theoretically supported an unlimited amount of CPUs
    c. Higher performance due to less cooling requirements
    d. Reduces memory congestion.
